

Post Hoc Comparisons - QAE

| | | Prior Odds | Posterior Odds | BF _{10, U} | error % |
|---|---|------------|----------------|---------------------|----------|
| 0 | 1 | 0.587 | 2.17e+15 | 3.69e+15 | 4.06e-19 |
| | 2 | 0.587 | 1.23e+37 | 2.10e+37 | 9.77e-42 |
| 1 | 2 | 0.587 | 8.55e+13 | 1.46e+14 | 8.71e-18 |

Note. The posterior odds have been corrected for multiple testing by fixing to 0.5 the prior probability that the null hypothesis holds across all comparisons (Westfall, Johnson, & Utts, 1997). Individual comparisons are based on the default t-test with a Cauchy (0, r = 1/sqrt(2)) prior. The "U" in the Bayes factor denotes that it is uncorrected.
